DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Saito et al (6,220,925).

Saito et al disclose a silver halide color photographic light-sensitive material excellent in color reproducibility. More particularly, the present invention relates to a silver halide color photographic light-sensitive material containing both a pyrrolotriazole coupler and a non-color forming colorless cyclic imide having a diffusion-resistant group. Specific examples of the high boiling point organic solvent having a boiling point of not less than 175.degree. C. at a normal pressure include phthalic acid esters (for example dibutyl phthalate, dicyclohexyl phthalate, di-2-ethylhexyl phthalate, didecyl phthalate, bis(2,4-di-tert-amylphenyl) phthalate, bis(2,4-di-tert-amylphenyl) isophthalate, or bis(1,1-diethylpropyl) phthalate, phosphoric acid or phosphonic acid esters (for example, triphenyl phosphate, tricresyl phosphate, 2-ethylhexyl diphenyl phosphate, tricyclohexyl phosphate, tri-2-ethylhexyl phosphate, tridodecyl phosphate, tributoxyethyl phosphate, tri-chloropropyl phosphate, or di-2-ethylhexyl phenyl phosphonate), benzoic acid esters (for example, 2-ethylhexyl benzoate, dodecyl benzoate, or 2-ethylhexyl-p-hydroxy-benzoate), amides (for example, N,N-diethyldodecanamide, N,N-diethylaurylamide, or N-tetradecylpyrrolidone), sulfonamides (for example, N-butylbenzenesulfonamide), alcohols or

phenols (for example, isostearyl alcohol, or 2,4-di-tert-amylphenol), aliphatic carboxylic acid esters (for example, bis(2-ethylhexyl) sebacate, dioctyl azelate, glycerol tributyrates, isostearyl lactate, or trioctyl citrate), aniline derivatives (for example, N,N-dibutyl-2-butoxy-5-tert-octylaniline), hydrocarbons (for example, paraffin, dodecylbenzene, or diisopropylnaphthalene) and chlorinated paraffins. Phosphoric acid esters and amides are particularly preferably employed as the high boiling point organic solvent used together with the coupler represented by the formula (1) according to the present invention. At least one compound selected from the phosphoric acid esters and amides is preferably employed alone or together with other high boiling point organic solvent. More preferably, at least one of the phosphoric acid ester is used together with at least one of the amides, or at least one of the phosphoric acid esters and at least one of the amide are used together with other high boiling point organic solvent (see especially column 31).

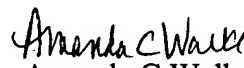

While the reference does not aim to solve the same problem as the instant invention, it clearly teaches the use of solvents meeting the limitations of the instant claims and in the examples, there are exemplified layers such as the first layer in column 72, which when calculate, falls within the scope of the instant claim limitations for the weight ratio.
